

Deutsch UK

A holistic approach to Lean implementation

Client:

Deutsch UK

What was delivered:

Lean Business Model

Sector:

Electrical Manufacturing

Deutsch UK is a division of a global company that manufactures electrical and fibre-optic interconnection systems designed to withstand harsh environments, including exposure to the elements, strong vibration and temperature change. Its core client base consequently operates in the defence, aerospace, Formula 1, marine and industrial transportation sectors.

To accelerate growth in an increasingly competitive market place, the company adopted a strategy to implement Lean Thinking across its business. This would not only involve Lean tools and techniques at shop-floor level, but would also involve investment in the business, the development of their people and the embedding of a continuous improvement culture.
